Your daily Solution

GW2IP

Gateway module that interfaces the Duo system to the IP world, expanding its functionality.

Among the features: the ability to receive the **video call, talk to the visitor and control access even remotely without limits of distances.**

The system is based on the Farfisa cloud service developed specifically to make installation, use and maintenance of the system as simple as possible. The gateway can be used not only for single-family installations, but also within one or more apartments of a multi-family system or as a shared device between all the apartments of the same system; in all cases the availability of an Internet connection, wired or wireless, is required. Each user can associate multiple mobile devices (Smartphone or Tablet) which will therefore activate simultaneously with the arrival of the call; only the user who first answers the call will be able to talk to the visitor and open the lock. The system also integrates the video memory function. The IPWAY CLOUD application is available for both Android and iOS systems in the respective stores. The GW2IP gateway can be powered either via the DUO bus or separately with a local power supply. In the latter case, when sizing the system, it is necessary to take into account a certain current draw from the bus for the video section as shown in the technical specifications below. The container can be installed on a DIN bar (9 modules).

Ready for a single user, it is expandable..

app

app

- App IpWay Cloud for iOS and Android

- Connecting to local net via Ethernet or Wi-Fi

--Proprietary Cloud infrastructure

- Automatic connection to the cloud

- Simplified web programming interface

- Videocalls

- Bidirectional audio and remote door opening

- Notice push
- Notice for lost call in case of missed answer

- Control auto switch-on on all external stations in an installation

- Audio activation with all the external stations even if case of auto switch-on

- Event list with all the calls, answers (even the lost ones),
with time and date (for 1 month)

- Video memory with 4 pictures for each received call (for 1 month)

- Remote actuators management
- Remote sensors management

- Integration with videosurveillance cameras

- Compatibility with existing Duo installations

gateway
EVOLUTION

**One *gateway* module only
for each one-way or multi-way system**

- You are in the office and somebody rings you at the door, but nobody is at home. Your smartphone rings, you see the person ringing, you can talk to him and if you want, you can open the door and let him in.

- you are at the supermarket, your son rings at the door because he has not the keys, but nobody is at home. Your smartphone rings, you see him, you talk to him, open the door and let him in.

- you are in your car and a visitor rings you at the door, but nobody is at home. Your smartphone rings, you see the person, and if you want, you can talk to him and if you want you can open the door and let him in.

- you are having a bath and someone rings you at the door. Your smartphone is near you and it rings, you see the person outside, you talk to us and if you want you can open the door.

- you are in a bar and you want to check if anyone is in the driveway. Take your smartphone, go to the app and see the camera watching what is happening in front of the camera.

...AND MANY OTHER POSSIBLE APPLICATIONS!
